MNNIT Allahabad

WELCOME TO **WEBCODE**

Welcome to WebCode at Avishkar 2024, the Techno Fest of MNNIT Allahabad!

Hosted by Rasayans, this hackathon is a thrilling opportunity for you to dive into the world of web development, flex your skills, and bring your most creative ideas to life. Over the coming days, you'll collaborate, innovate, and solve real-world problems, pushing the boundaries of what's possible on the web.

We're excited to witness your passion, ingenuity, and determination in action. Remember, this event is as much about learning and experimenting as it is about competing—so take risks, have fun, and build something extraordinary.

Best of luck to all participants, and may the best ideas shine!

CODE OF **CONDUCT**

Our hackathon is a space for innovation, collaboration, and learning. To create a positive and productive environment, all participants must adhere to the following guidelines:

Respect and Inclusivity

Treat all participants, mentors, and organizers with respect. Discrimination, harassment, or inappropriate behavior of any kind will not be tolerated. Embrace diversity, and foster a supportive atmosphere for everyone.

Original Work Within Timeframe

All code, designs, and solutions should be created during the hackathon timeframe. Pre-existing projects, third-party code, and templates are allowed only if they are explicitly stated as such and do not constitute the core of the submission.

Collaboration and Fair Play

Work collaboratively, share knowledge, and provide constructive feedback. Refrain from any form of plagiarism or misconduct that undermines fair competition.

Compliance and Accountability

Follow all instructions from organizers, including project submission guidelines, deadlines, and judging criteria. Participants failing to meet these guidelines may be disqualified.

WebCode
Instructions

Use GitHub

All code must be hosted on GitHub, with clear instructions for setting up and running the application documented in a README.md file. Any environment variables should be securely shared with event coordinators only.

Code of Conduct

Participants are expected to adhere to the hackathon's Code of Conduct, which fosters respect, collaboration, and inclusivity. Ensure that all team members understand and agree to the guidelines, as failure to comply may result in disqualification.

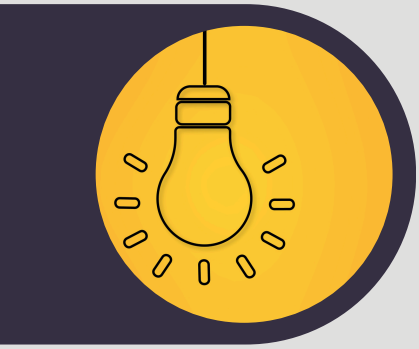

Deadline and Requirements

Projects must be submitted by the deadline, along with a short presentation (2-5 minutes) showcasing the idea, features, and functionality. Teams should also provide a demo video (up to 3 minutes) or a live demo link if available.

MNNIT Allahabad

Our **Timeline**

Abstract Submission (04/11/2024)

In the initial phase of the hackathon, teams are required to submit an abstract outlining their project idea. The abstract should include a brief description of the problem you're solving, the technology stack you plan to use, and your proposed solution. This submission helps the judges understand your project's scope and feasibility. Be sure to include any unique or innovative features you intend to implement.

Mid Evaluation (08/11/2024)

At this stage, teams will present their progress to the judging panel. You should demonstrate the core functionality of your project and how you are addressing the problem described in your abstract. The judges will assess your technical implementation, user interface, and how well you're on track to achieve your initial goals. Feedback will be provided to help refine your project before the final submission. Be prepared to show a working demo of your key features.

Final Evaluation (13/11/2024)

For the final evaluation, teams must submit their fully developed projects. This includes a live demo, along with access to your GitHub repository. Teams will be required to physically present their projects. The judges will evaluate your project on the basis of creativity, technical execution, user experience, and overall impact. Make sure to highlight how your solution effectively solves the problem you set out to address, and demonstrate any advanced features or optimizations you've implemented.

Rules & Eligibility

1. Team/Individual Participation (Max 4 Members)
2. All branches are allowed to participate.
3. Cross-Year Teams are allowed
4. Any tech stack is allowed, mobile apps are permitted as well.
5. **Teams can contact the coordinators for a free temporary OpenAI API Key for developing any AI features in the project.**

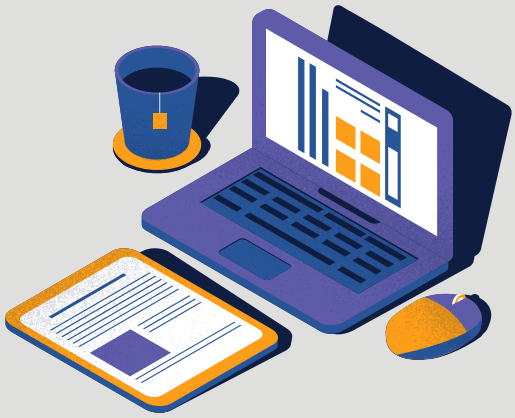

PROBLEM STATEMETS

1. **Smart Campus Connect**
2. **Ecosaver**
3. **WellnessWise**
4. **Open-Ended Challenge**

SMART CAMPUS CONNECT

Build a campus communication and resource-sharing platform to connect students, faculty, and staff with essential resources and activities at MNNIT.

Basic Features:

- **User Authentication:** Simple sign-up and login functionality with email and password.
- **Profile Creation:** Users can create profiles with basic information like name, department, and year.
- **Announcements Feed:** A basic feed where campus announcements can be shared, viewable by all users.
- **Search:** Basic search functionality to find posts or users by name or department.

SMART CAMPUS CONNECT

Medium Features

- **Events and Calendar:** An events page where users can view and RSVP to upcoming campus events, with a calendar view option.
- **Messaging System:** Simple, real-time chat or message functionality allowing users to connect with each other.
- **Resource Sharing:** A section where users can upload and download notes, assignments, and other resources (PDF or image formats).
- **Notifications:** Users get notifications for new announcements, upcoming events, and received messages.

Advanced Features

- **Smart Recommendations:** AI-based suggestions for events, resources, and connections based on the user's department, interests, and interaction history.
- **Admin Dashboard:** A dashboard for admins (faculty or event organizers) to manage announcements, events, and moderate posts.
- **Voice-Based Interaction:** Implement voice-based commands or voice-assisted browsing of resources (for accessibility).
- **Gamification:** Users earn points for contributing resources, attending events, or participating in discussions, with a leaderboard feature.

MNNIT Allahabad

Ecosaver

Design a web app that helps users track, analyze, and reduce their carbon footprint through their daily habits and choices.

Basic Features

- **User Registration:** Simple sign-up/login functionality for individual users.
- **Footprint Calculator:** Simple forms to input data on daily activities (transport, food, energy usage) to calculate an approximate carbon footprint.
- **Daily Tips:** Display eco-friendly tips daily (hardcoded or from a small database).
- **Progress Tracker:** Basic graphs showing weekly or monthly footprint trends for users.

MNNIT Allahabad

Ecosaver

Medium Features

- **Personalized Dashboard:** Personalized view showing detailed information on users' carbon footprint based on categories like transportation, diet, and utilities.
- **Suggestions and Goals:** Based on user activities, the app suggests achievable goals (e.g., "Walk 1 km instead of driving") and tracks progress toward them.
- **Community Challenges:** Users can join campus-based challenges, like "Walk 10,000 steps a day," and see a leaderboard of top performers.
- **Impact Visualization:** Basic data visualization for users to see the collective impact of the community (total emissions saved).

MNNIT Allahabad

Ecosaver

Advanced Features

- **AI-Powered Recommendations:** AI analyzes individual usage patterns and gives custom suggestions to reduce their carbon **footprint.**
- **Carbon Offset Marketplace:** Connects to a mock marketplace where users can buy carbon credits or donate toward environmental causes.
- **Social Sharing:** Users can share their achievements and progress on social media, encouraging a broader impact.

WellnessWise

AI-Powered Personal Health Companion

Develop "WellnessWise," an AI-driven web application designed to help users monitor, understand, and improve their mental and physical well-being through personalized insights and community support.

Basic Features

- Implement secure sign-up and login functionality.
- Allow users to create personal profiles with basic information.
- Provide an interface for logging daily activities (sleep, meals, exercise).
- Include mood tracking with options to select emotions.
- Offer articles, videos, and tips on health and wellness topics.

WellnessWise

AI-Powered Personal Health Companion

Medium Features

- Use machine learning to analyze logged data and detect patterns.
- Provide personalized feedback and highlight correlations.
- Allow users to set personal health goals.
- Visualize progress with charts and milestone celebrations.
- Implement forums or group chats for user interaction.

Advanced Features

- Develop/integrate AI models to predict potential health issues.
- Send proactive alerts and recommendations.
- Integrate a conversational AI assistant for natural language interaction.
- Sync data from fitness trackers and health apps.

MNNIT Allahabad

OPEN-ENDED **CHALLENGE**

This is your chance to bring your unique ideas to life. Identify a problem that matters to you, and create a solution that showcases your creativity, technical skill, and vision. We're excited to see how you can make an impact through innovation.

Whether it's an app, a web tool, or a platform, we want to see what you can dream up and develop! Push boundaries, think outside the box, and demonstrate how technology can address real-world challenges.

Thank You
